## 1. Rafting on the Uryu River

The "Uryu River" leads from Lake Shumarinai.  
The rare fish "Itou" lives here as well.

It is possible to see Itou swimming down the river.  
You can get a real sense of the precious environment.

## 2. Lake Shumarinai Wakasagi Fishing Tour

You can observe the "wakasagi" fishery, a fisheries resource of  
Lake Shumarinai. At this time, the net had Itou.  
The children cheered.

### 3. Butkamabetsu River floodplain visit

Professor Taishi Nakamura of Hokkaido University and other and other specialists in the field of nature explain about the close relationship between rivers and forests, and how they should be and forests, while walk through the primeval forests. We also visited. The wooden bridge that was build by the crowdfunding.

#### 4. Observed from the observatory in the Hokkaido University Experiment Forest

There is an observatory near the "Doro River" that flows through the Hokkaido University Experiment Forest.

The area is home to a "primeval forest," which is very rare in flat areas of Hokkaido.  
That is very valuable.

Day tours are also being considered.
